SUMMARY

Full-Stack Developer and B.Tech Computer Science student (2023–2027, GPA: 8.2/10) at RKGIT, Ghaziabad, specializing in the MERN stack, Next.js, TypeScript, and Generative AI integrations. Proven ability to ship production-grade systems — DEV DNA handled 10,000+ edge requests on Vercel with a fault-tolerant, multi-provider LLM pipeline. Strong foundation in RESTful API design, system design, and database optimization. Solved 450+ DSA problems on LeetCode and GeeksforGeeks.

TECHNICAL ACHIEVEMENTS

- DEV DNA — Production Scale: Engineered and deployed an AI-powered GitHub analyzer serving 10,000+ edge requests on Vercel with zero downtime under traffic spikes
- Binary Bits 2024 — DSA Contest Winner: Ranked 1st in a college-level competitive programming contest testing algorithmic problem-solving under time constraints
- Hackathon — 2nd Place Finish: Led a team to a 2nd-place finish in a college-level hackathon, overseeing full-stack architecture and delivery

PROJECTS

DEV DNA | [Live](#) | [GitHub](#)

Jan 2026 – Present

AI-powered GitHub Analyzer for detailed developer profiling and skill evaluation

- Architected an AI-powered developer analytics platform using Next.js and Node.js, integrating LLM APIs to evaluate GitHub profiles across skills, commit quality, and blind spots
- Engineered a fault-tolerant AI pipeline with automatic provider failover and Redis caching, reducing API latency and ensuring 99%+ uptime for concurrent users
- Designed a structured JSON response system supporting four analysis modes (Analyze, Improve, Judge, Roast), enabling consistent, directly parseable outputs for frontend consumption
- Deployed on Vercel using a no-auth, stateless architecture — scaled to 10,000+ edge requests with no performance degradation

MOMENTUM | [Live](#) | [GitHub](#)

Sep 2025 – Present

A productivity partner app integrating gamification to improve user engagement

- Built a full-stack productivity web app using Next.js, MongoDB, and Tailwind CSS, incorporating gamification mechanics to drive task completion and habit consistency
- Implemented secure multi-user authentication with NextAuth supporting JWT sessions and OAuth 2.0 provider integration
- Designed a modular task management system with streak tracking, progress visualization, and personalized user dashboards

TECHNICAL SKILLS

Languages: Java, C++, JavaScript (ES6+), TypeScript

Frontend: React.js, Next.js, Tailwind CSS, Responsive UI/UX Design

Backend & Databases: Node.js, Express.js, RESTful API Design & Integration, MongoDB (NoSQL), Redis, JWT, OAuth 2.0

AI & Integrations: LLM APIs (OpenAI/Groq), Generative AI Integration, Fault-Tolerant API Pipelines, Redis Caching

Core CS: Data Structures & Algorithms, Object-Oriented Programming, DBMS, Operating Systems, System Design, Full-Stack Development

Tools: Git, GitHub, VS Code, Linux, Postman, Vercel

EDUCATION

RKGIT, Ghaziabad: B.Tech Computer Science | 2023–2027 | GPA: 8.2/10

Shri Guru Ram Rai XII: CBSE | 2022 | 64%

St. Mary's Convent School X: ICSE | 2020 | 80%
